WebJEDMICS User Training

The Joint Engineering Data Management Information and Control System (JEDMICS) provides the means to efficiently convert, store, protect, process, locate, receive and output information previously contained on aperture cards, paper, and mylar. Large engineering drawings and related text are scanned and stored on network-accessible digital media, providing near-immediate online access via the world wide web. JEDMICS provides the capability to accept digital data from CAD stations and other digital processes.

Welcome to WebJEDMICS

- This manual in conjunction with the “Help” files found in your viewer programs provide guidance required to access the programs, query the repository and retrieve drawings for viewing and printing.
- The WebJEDMICS password expires every 90 days. The password:
  - Is case sensitive
  - Consists of a combination of at least 8 alpha, numerical, and special characters
  - Can not contain personal information about you such as your name
  - Can not have been used previously within the last 3-months
- If you have any questions concerning WebJEDMICS, feel free to contact the Help Desk at their respective sites;
  - Robins (472-3008/3009) (DSN)
  - Tinker (336-4422) (DSN)
  - Hill (775-6078) AFBs (DSN)

Training Objectives

- Users will be able to view and print engineering drawings by accessing JEDMICS via the world wide web. An account for Tinker AFB and Hill AFB may be requested from the Robins AFB helpdesk; however, other accounts must be requested from each site's helpdesk.

- Users will be able to view, print or download a single sheet, an entire drawing number, or a group of drawing numbers.

- Users will understand the concept and requirement for ImageR, the officially supported C4 viewer.

- Users will understand the creation of "Temporary Data Sets" and how to bulk download images for viewing or printing. This feature will be used frequently by those requiring a large quantity of images.

- Introduction to MEDALS – Military Engineering Data Asset Locator System is an automated information system that serves as the central index of engineering data for the Department of Defense.

PREREQUISITES for ACCESS to webJedmics

- Must obtain a userid and password. Email request for security package to jedmics@robins.af.mil for an account at RAFB.
  - * Note: For JEDMICS accounts to other services contact their helpdesk

- Ensure that your computer has a viewer (ImageR) for C4 file types. (See separate ImageR download/install instructions)

- Create a “temp” directory on your C:\ (drive). This is the directory where the images will be stored.

PREREQUISITES to Bulk Download Images

- The downloaded files will be in .zip format.

- You must have a zip utility on your PC, such as "WinZip" or "XP
to extract the files.

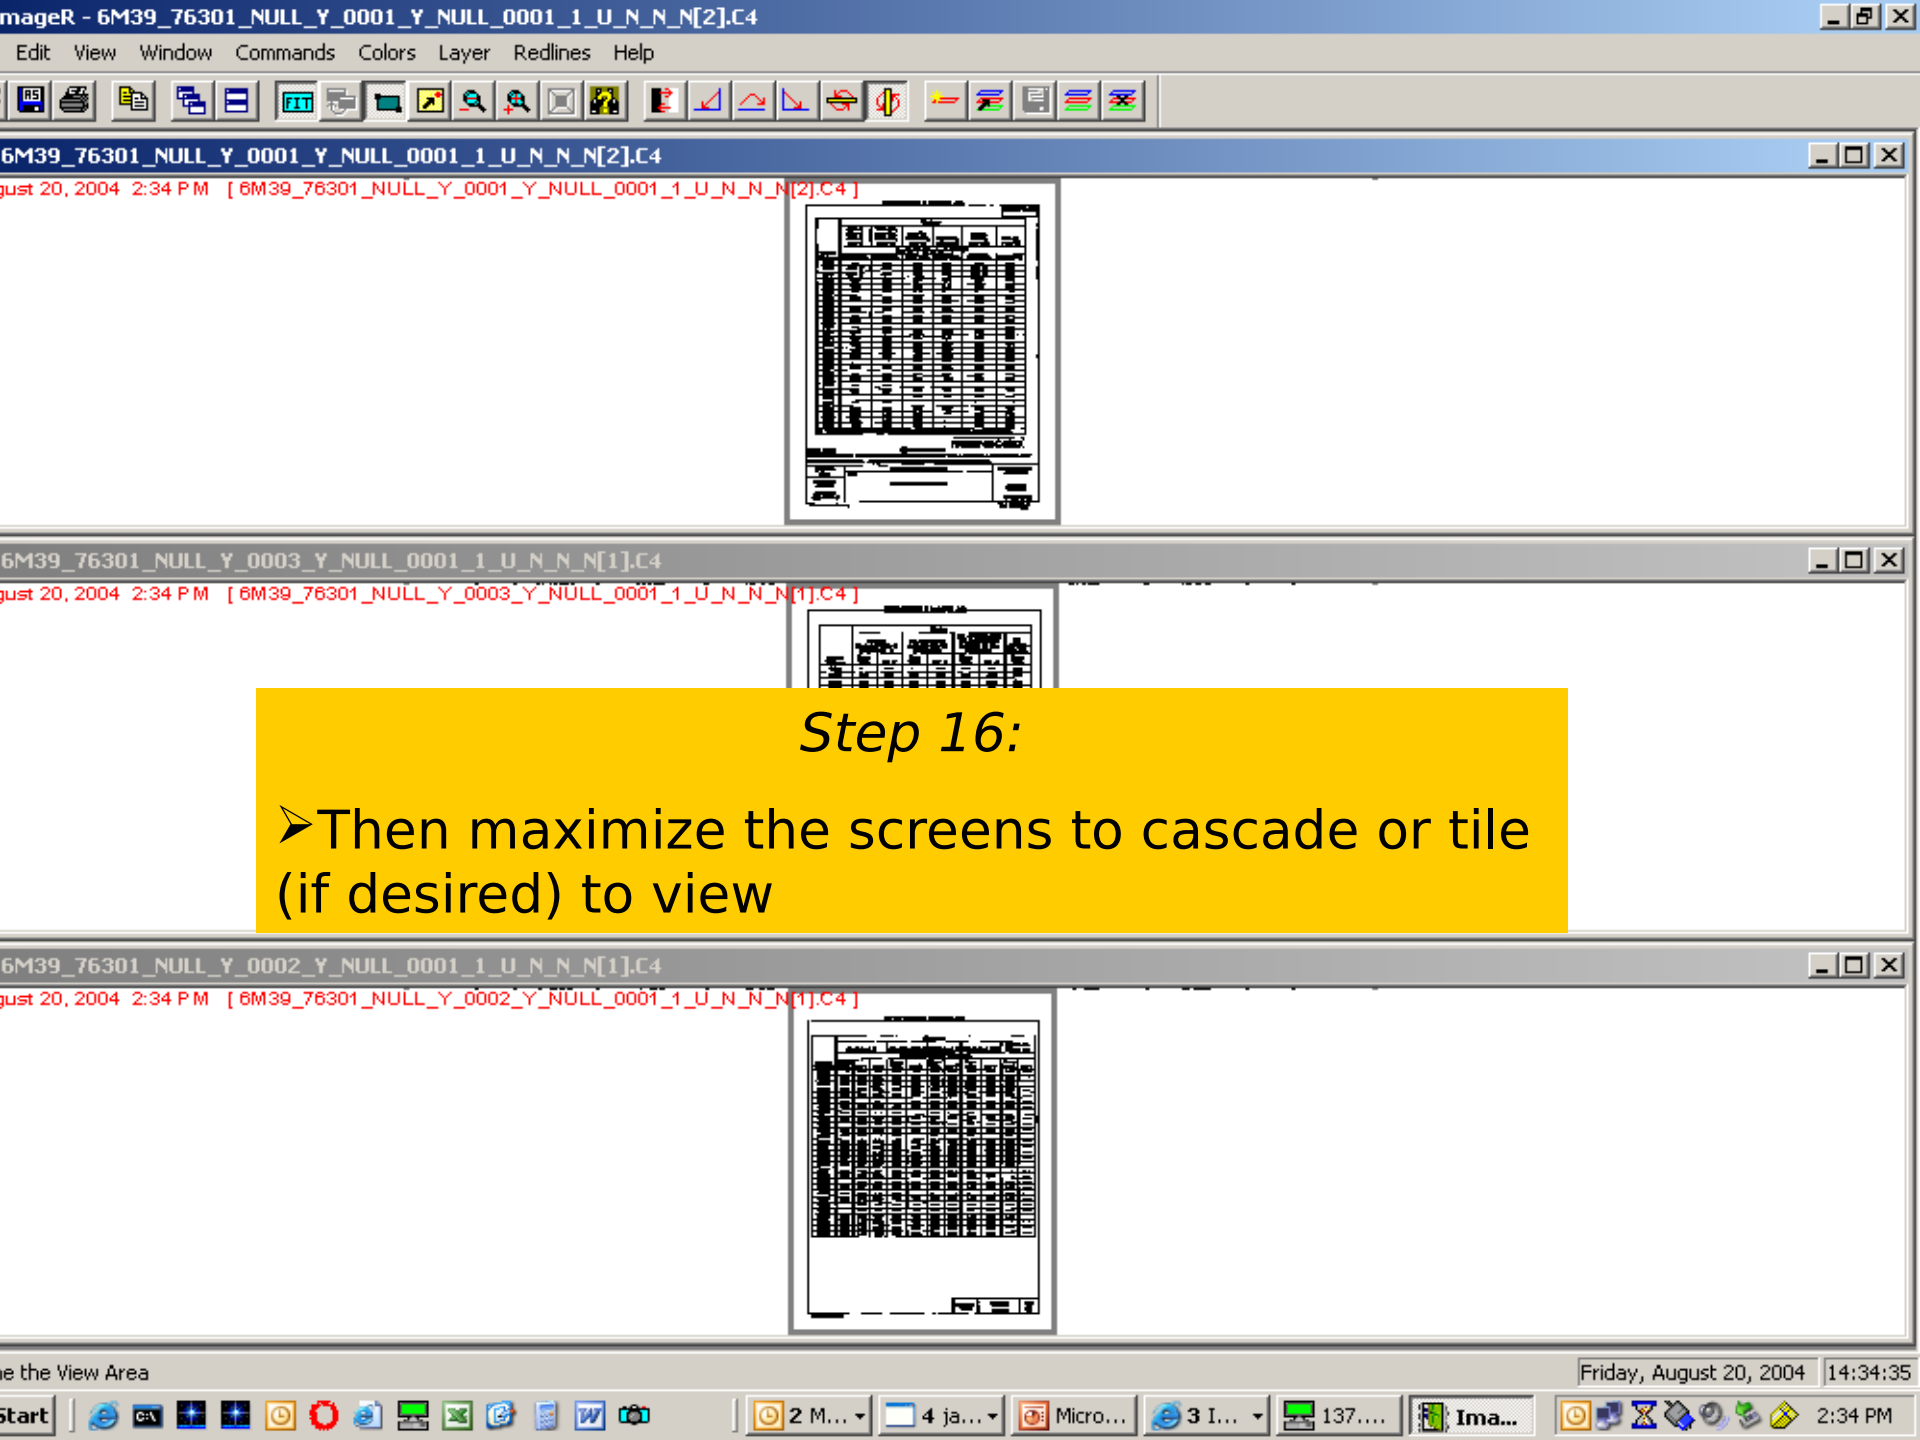
Step 15:

- Shrinking the screen a bit until all images are downloaded makes them easier to work with.



Step 16:

- Then maximize the screens to cascade or tile (if desired) to view

- Plot Img(s): Prints to a JEDMICS printer

- LP: Local Print:
- Prints to your desk top printer or the designated network printer.

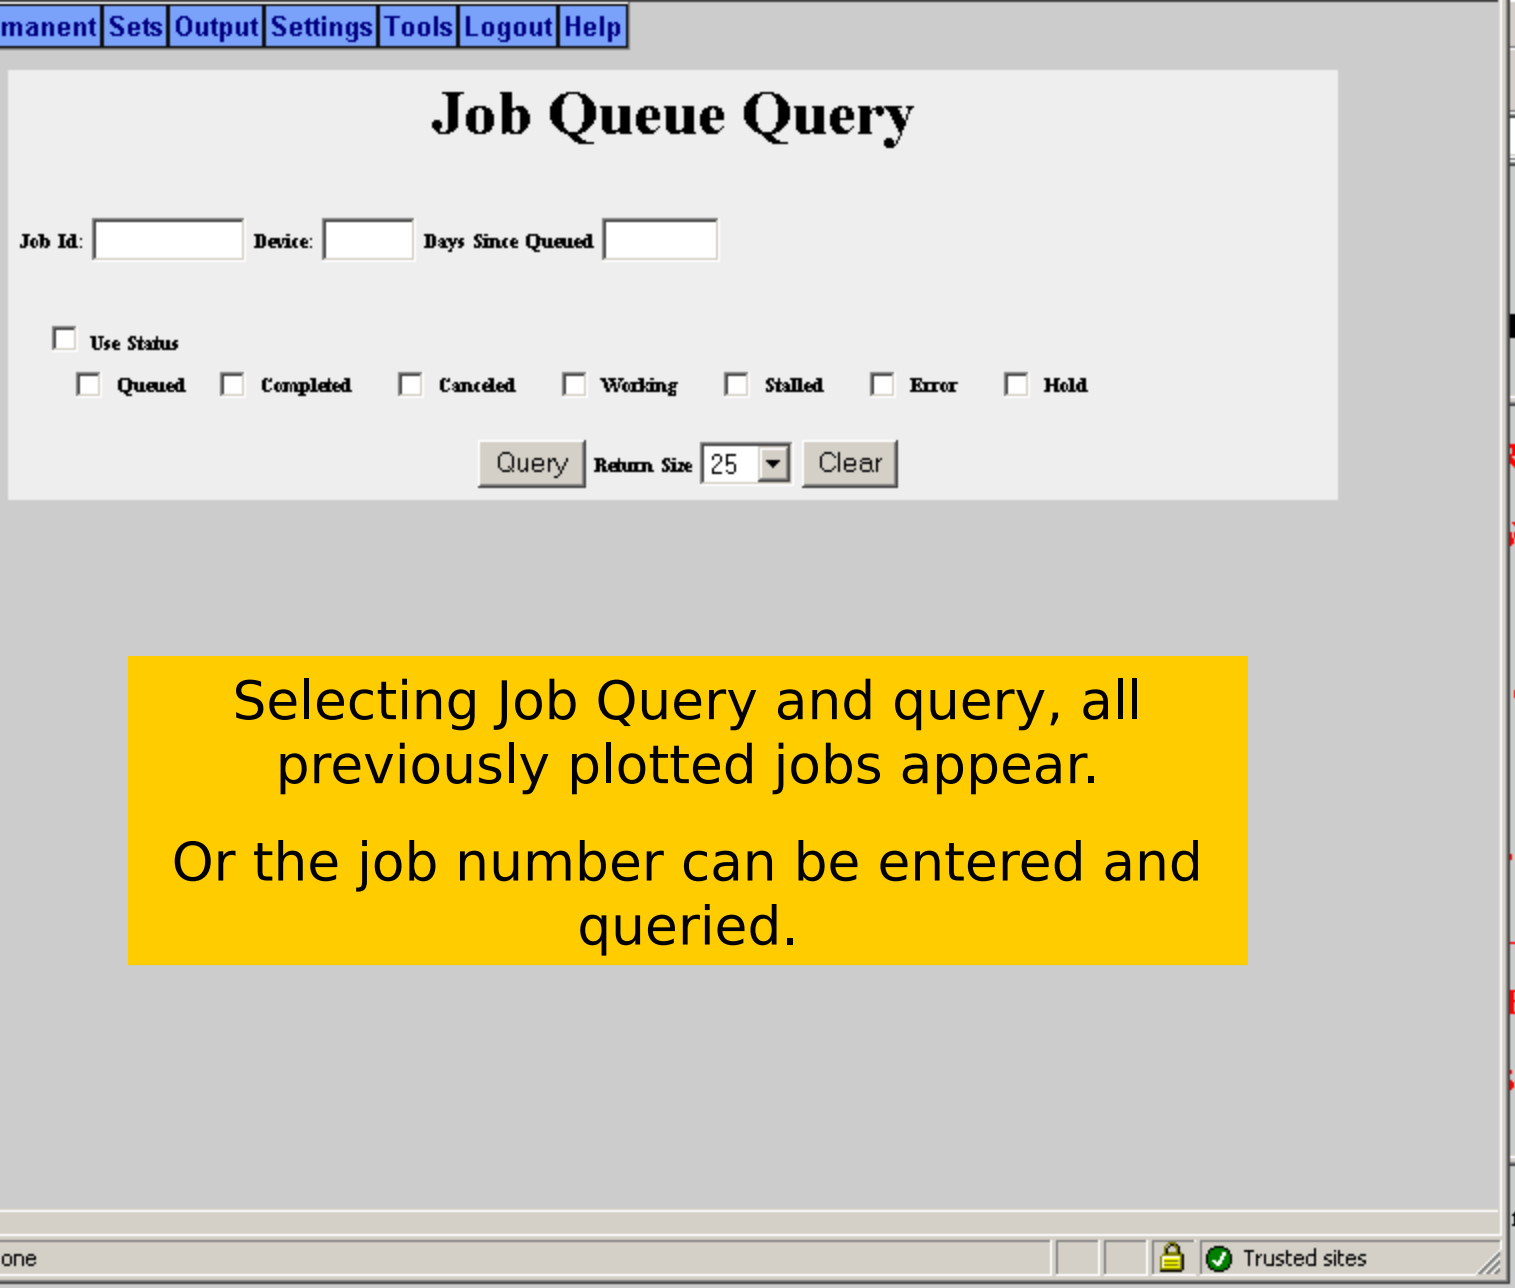
It’s a good idea to write down the job number that relates to each job you do. You can verify your **prints** with your job number.



Selecting Job Query and query, all previously plotted jobs appear.

Or the job number can be entered and queried.

Step 28:
Note: The top bar of the WinZip frame indicates your Job ID and the bottom frame indicates the number of files to be extracted.
With your mouse, select the <Extract> icon.
DO NOT <select> any of the files inside.

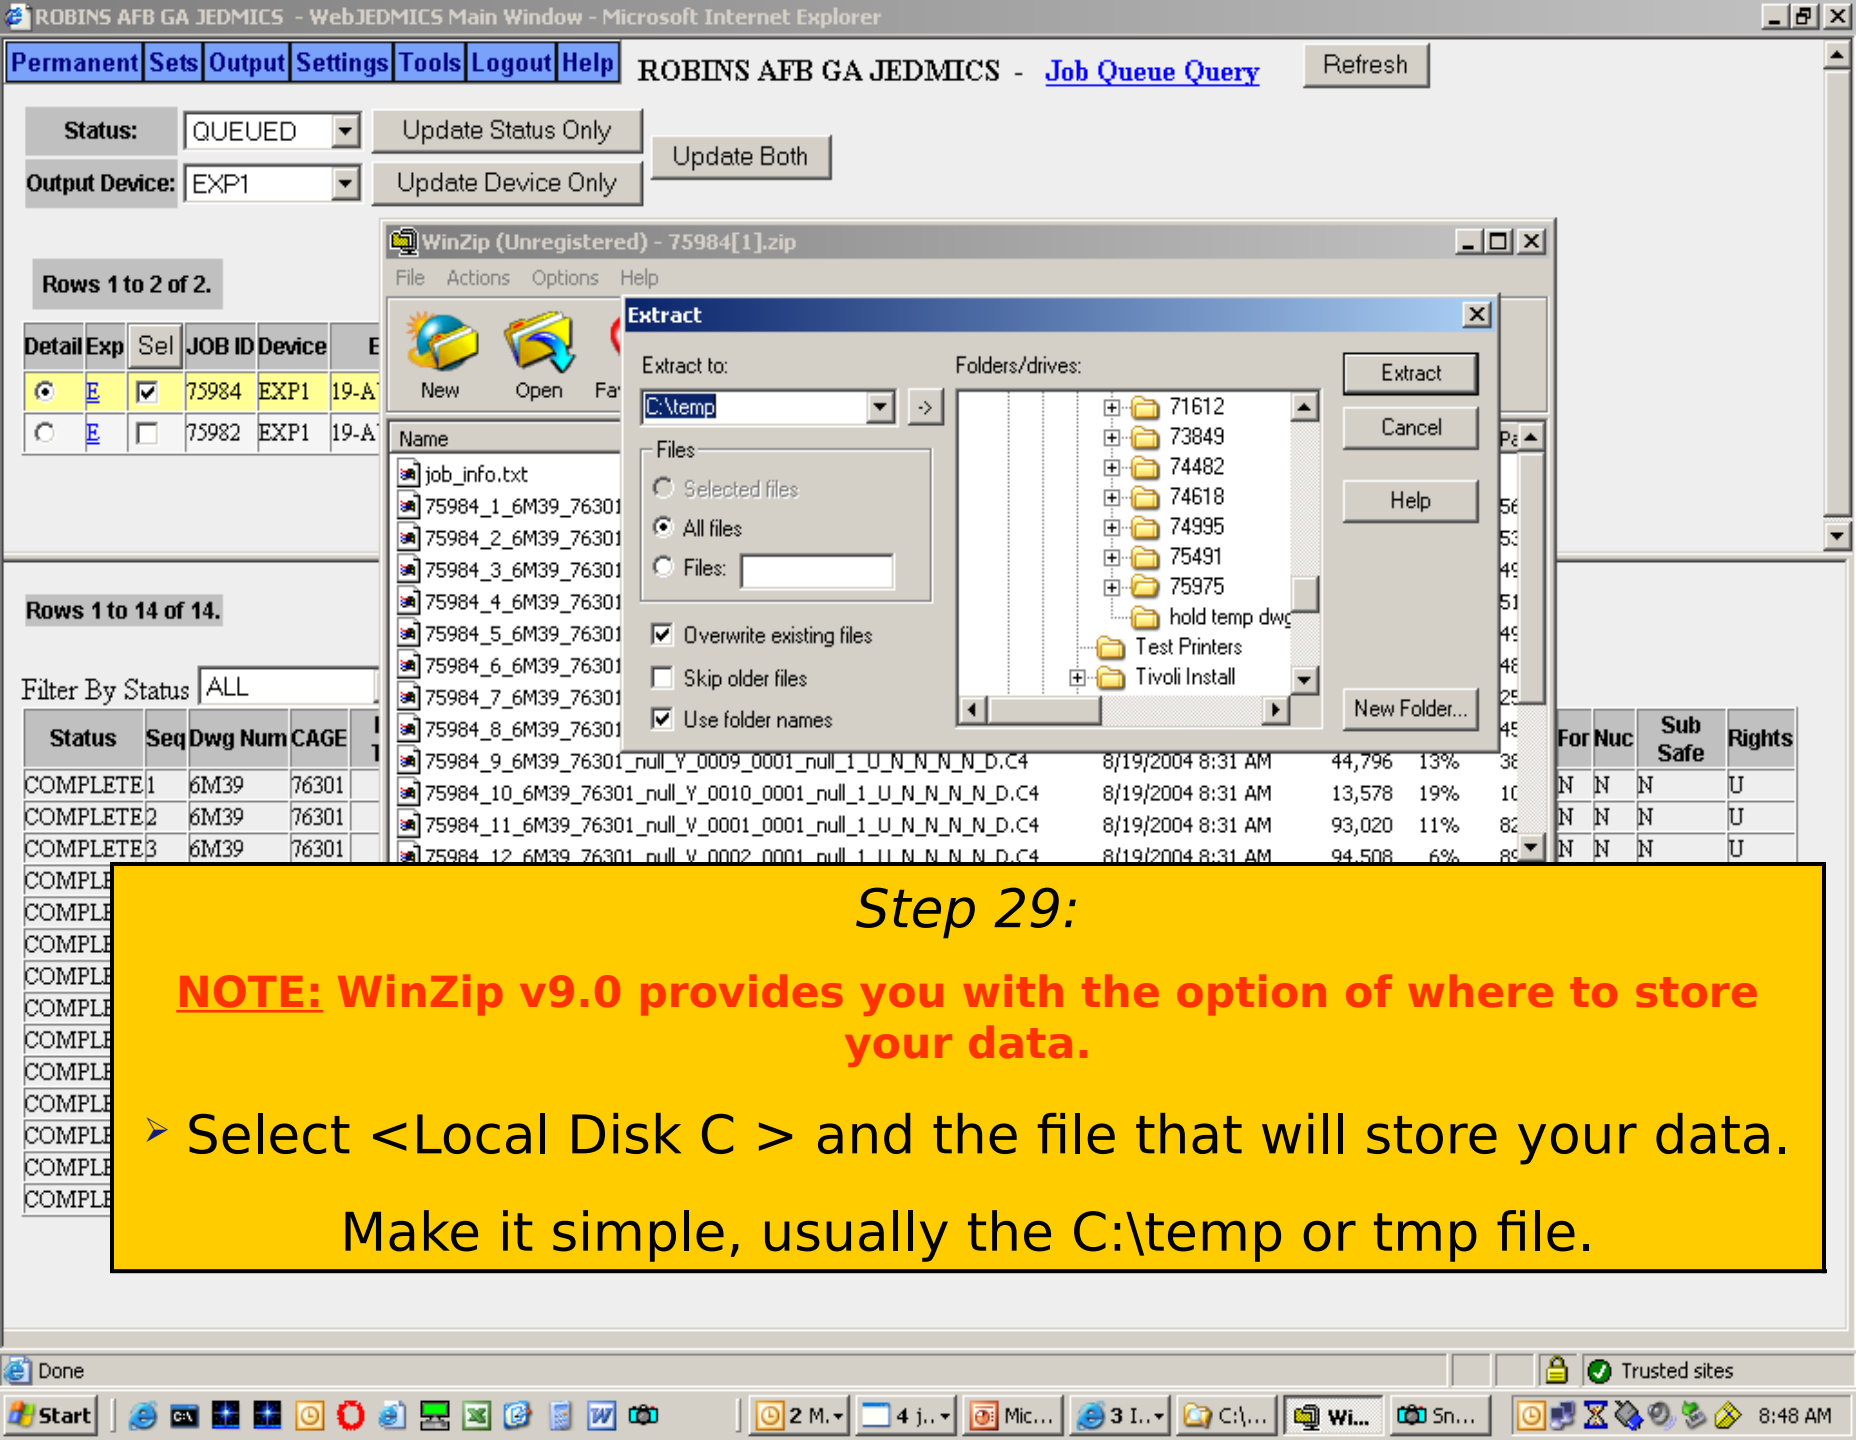
WinZip ...
8:51 AM

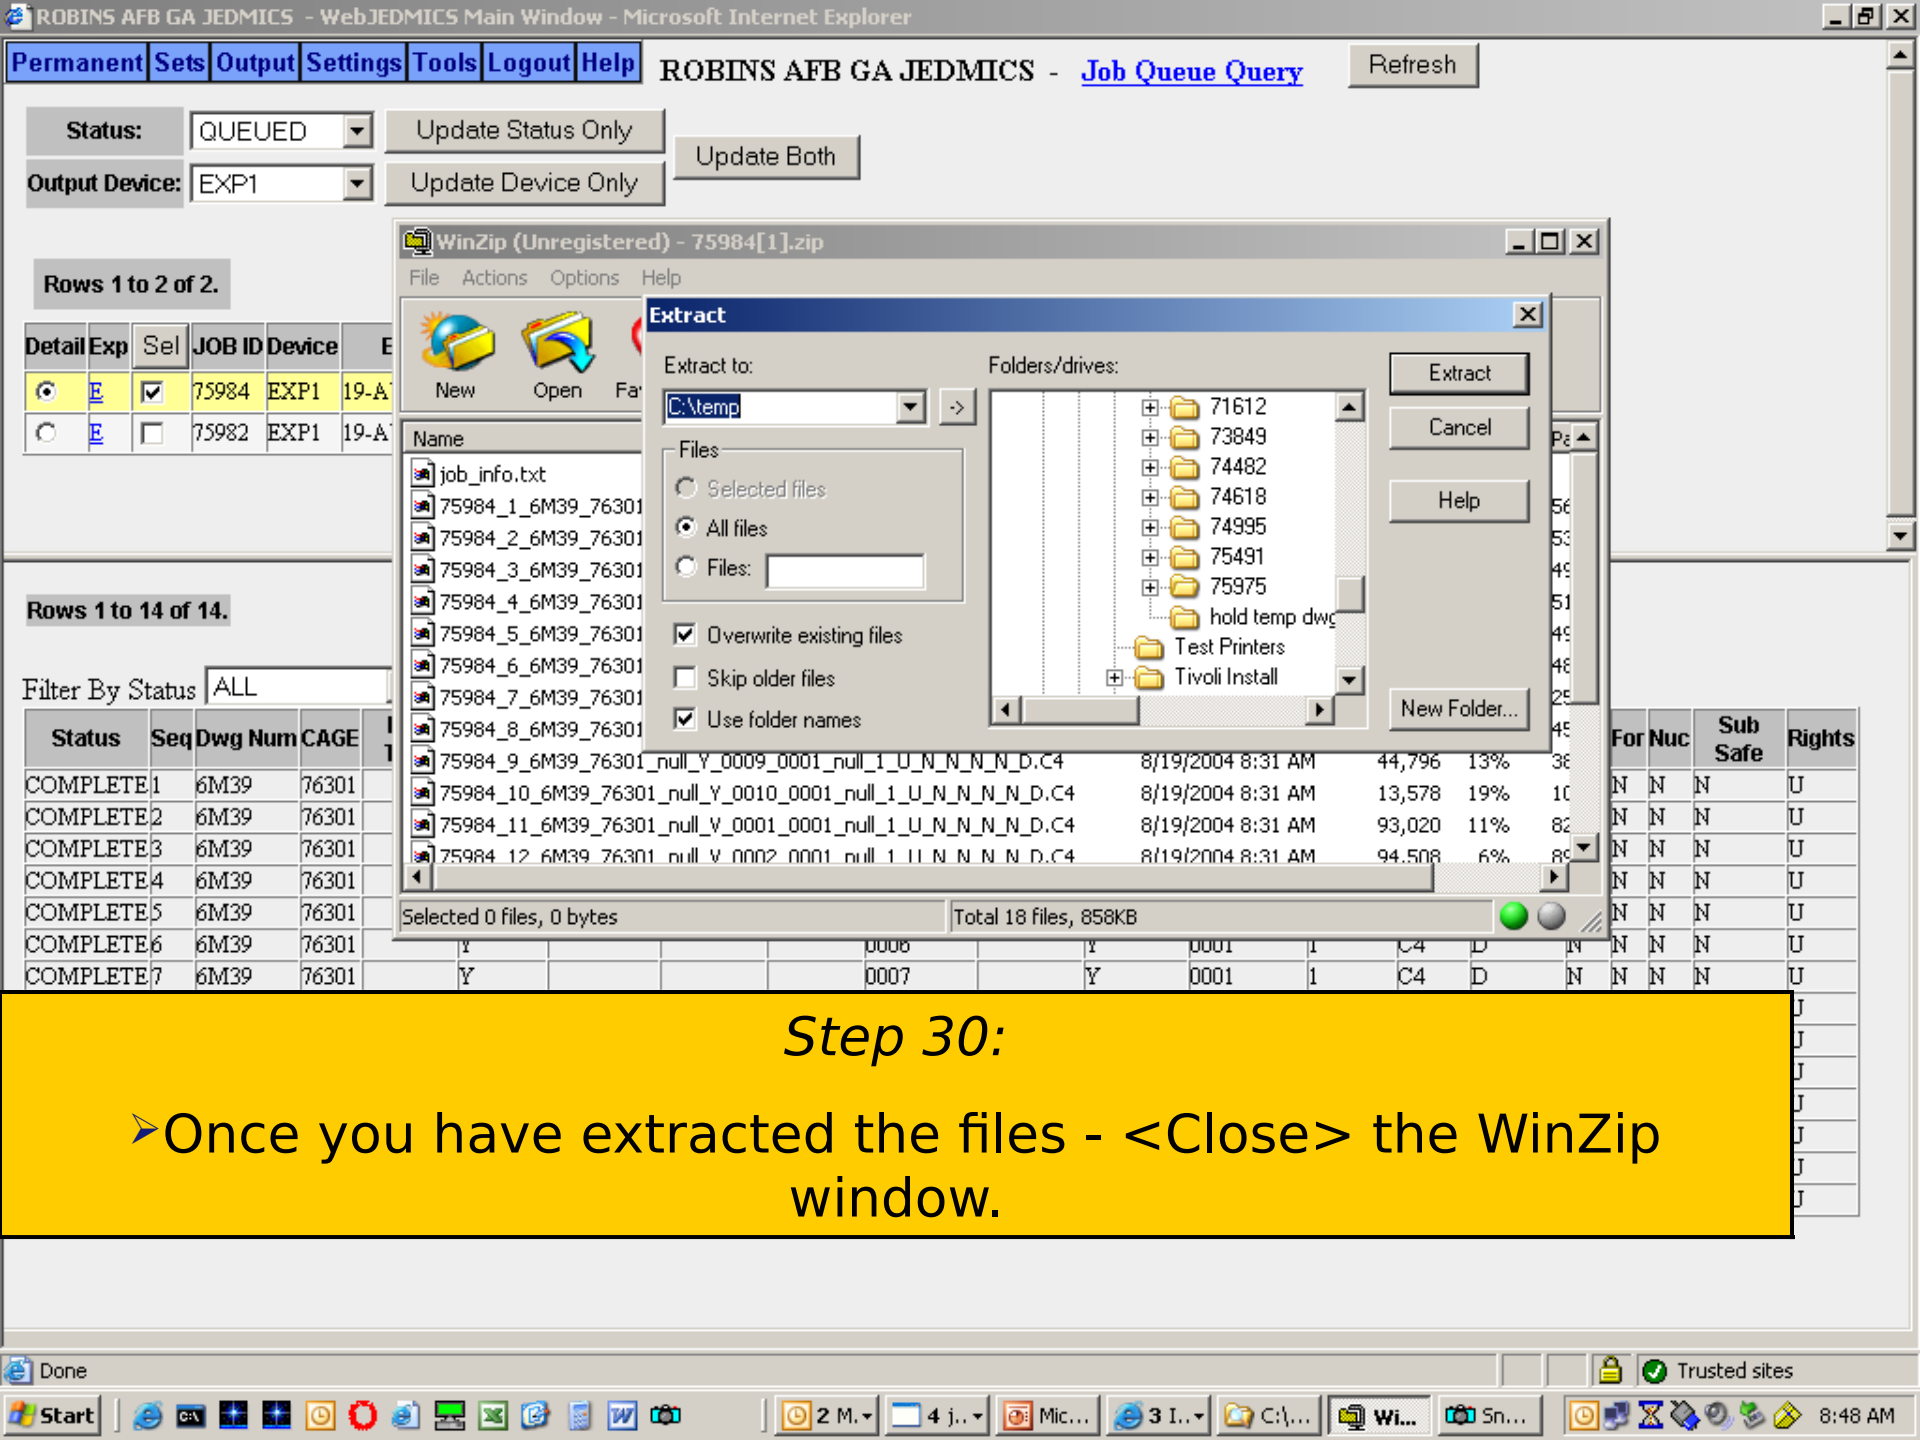


Step 29:

<u>NOTE:</u> WinZip v9.0 provides you with the option of where to store your data.

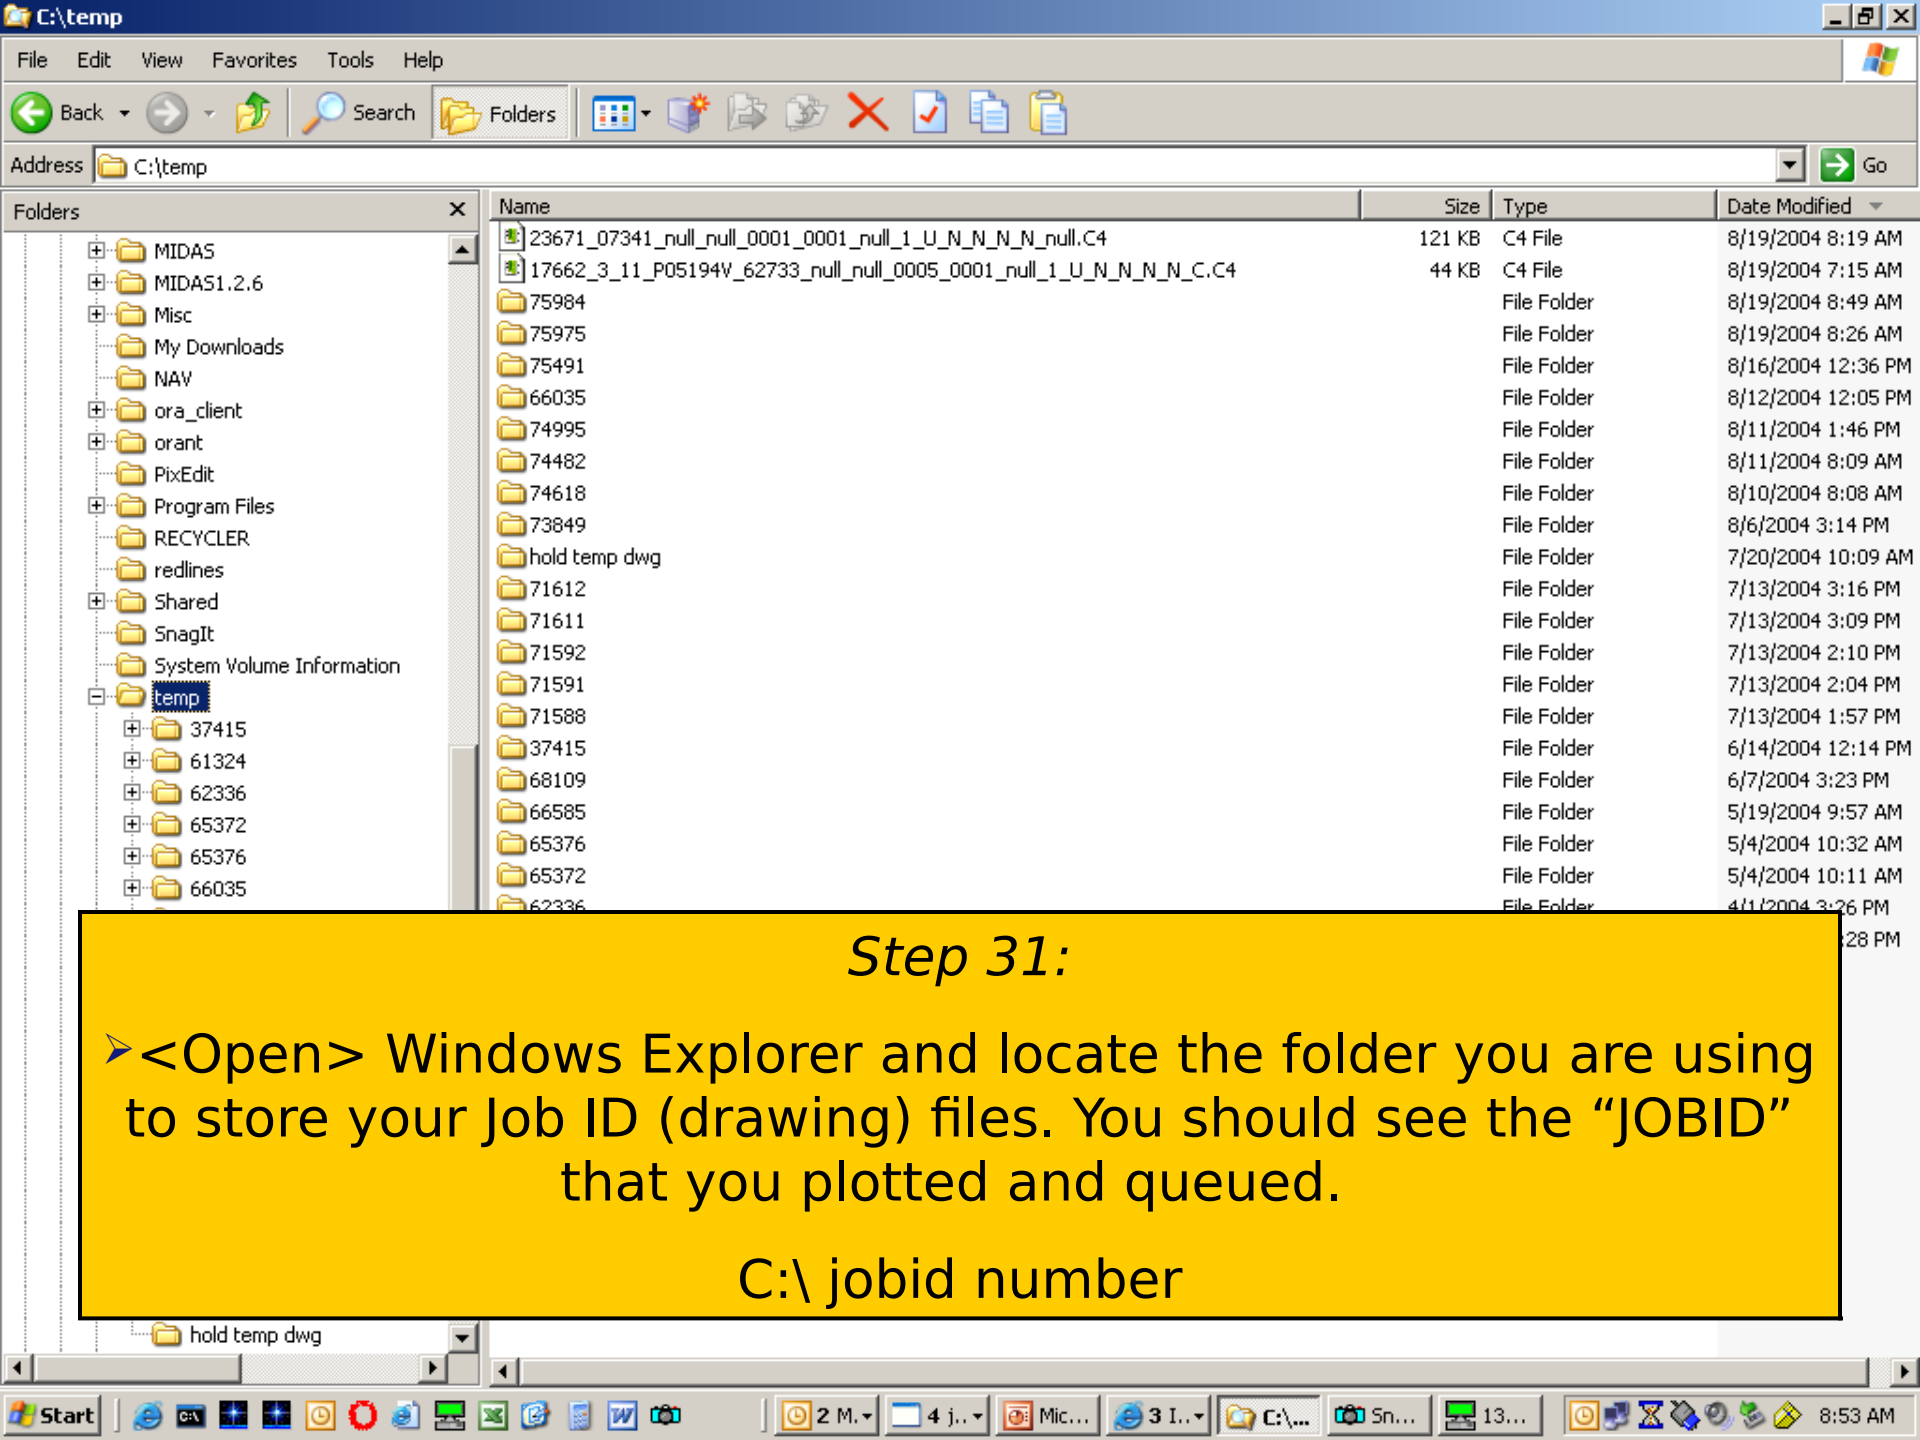
- Select <Local Disk C > and the file that will store your data.

Make it simple, usually the C:\temp or tmp file.



Step 30:

- Once you have extracted the files - <Close> the WinZip window.



Step 31:

- <Open> Windows Explorer and locate the folder you are using to store your Job ID (drawing) files. You should see the “JOBID” that you plotted and queued.

C:\ jobid number

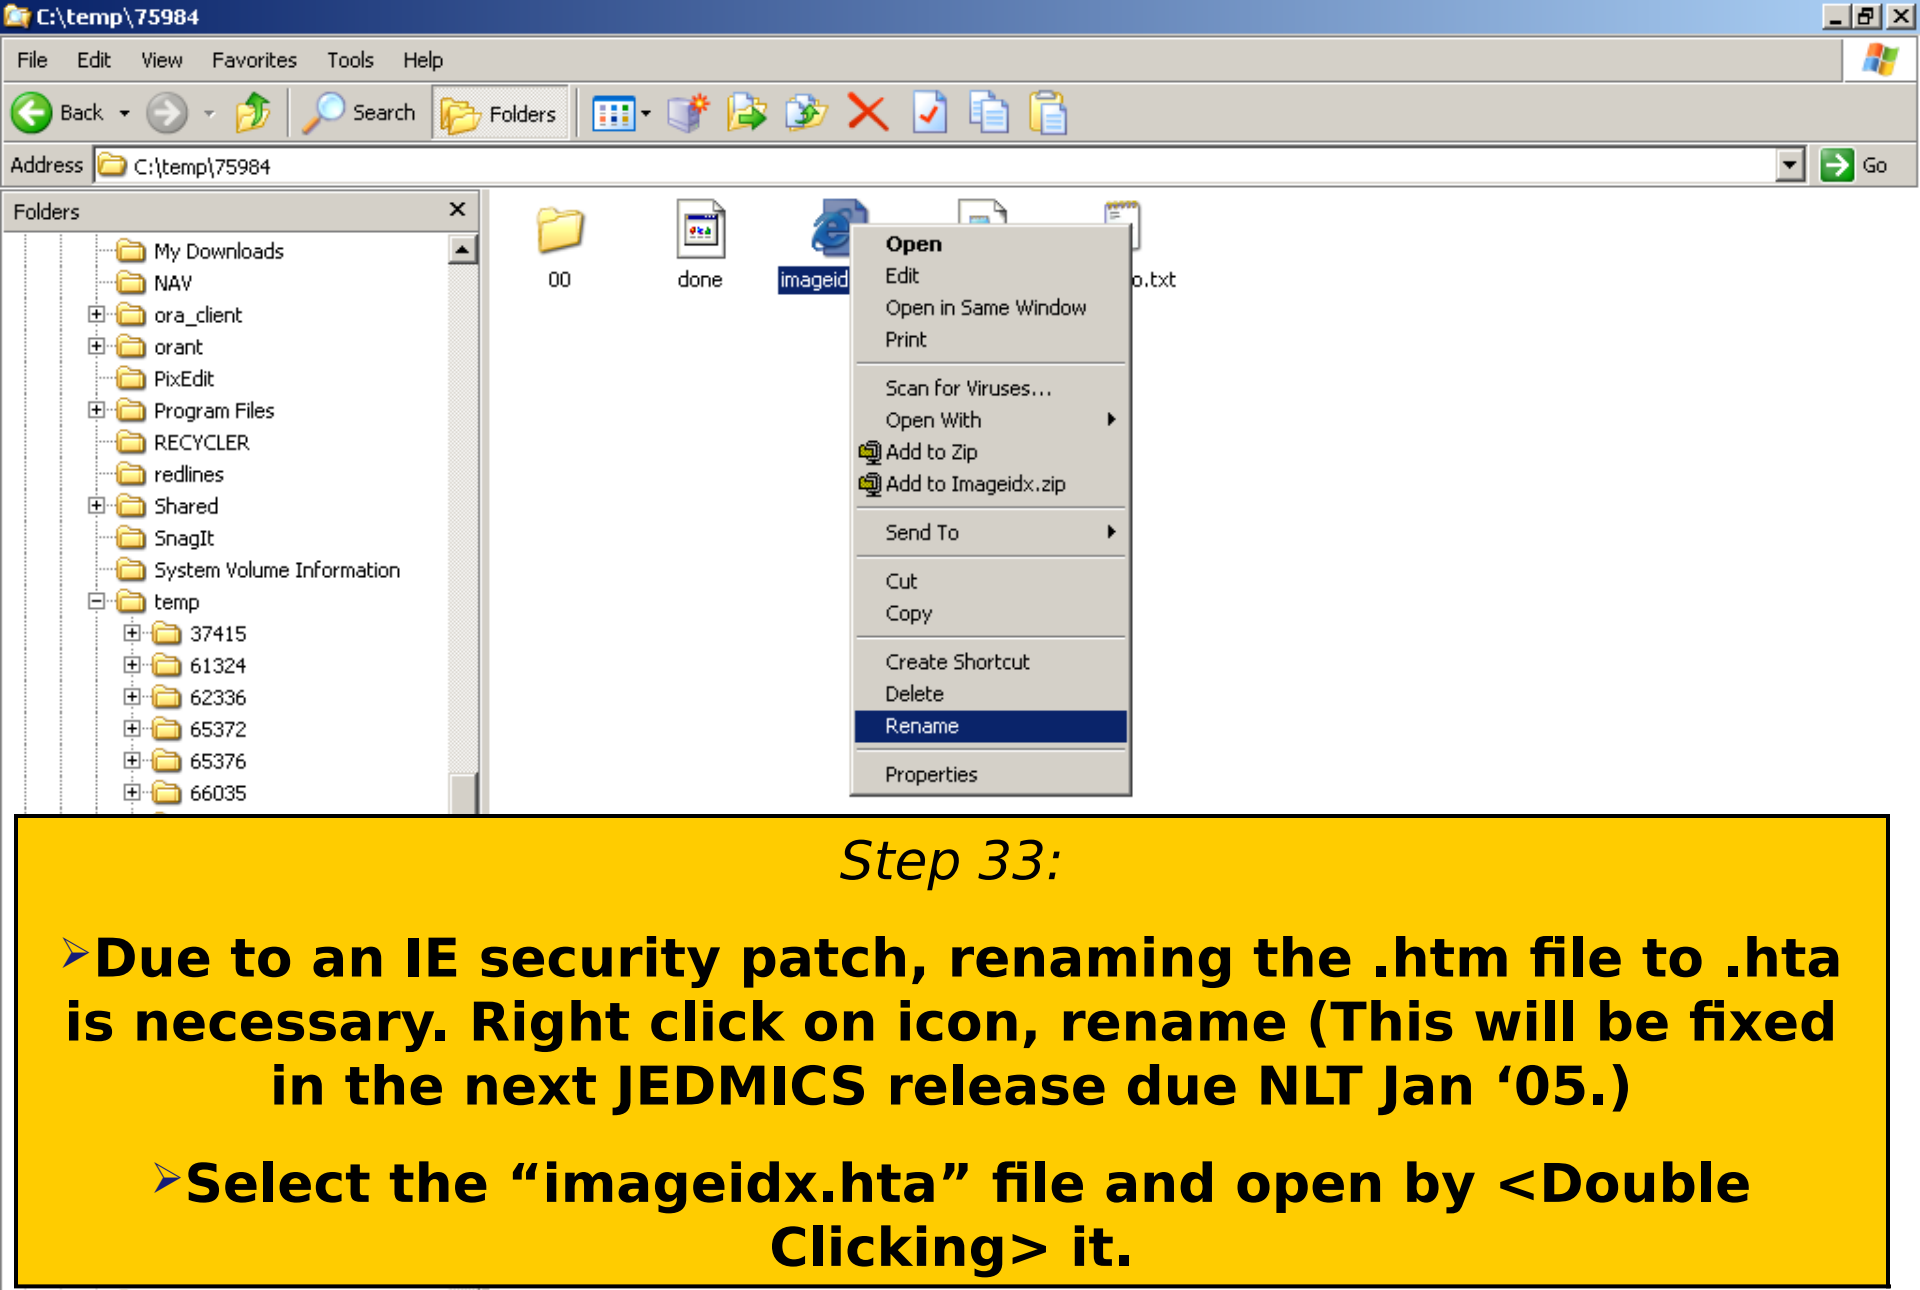
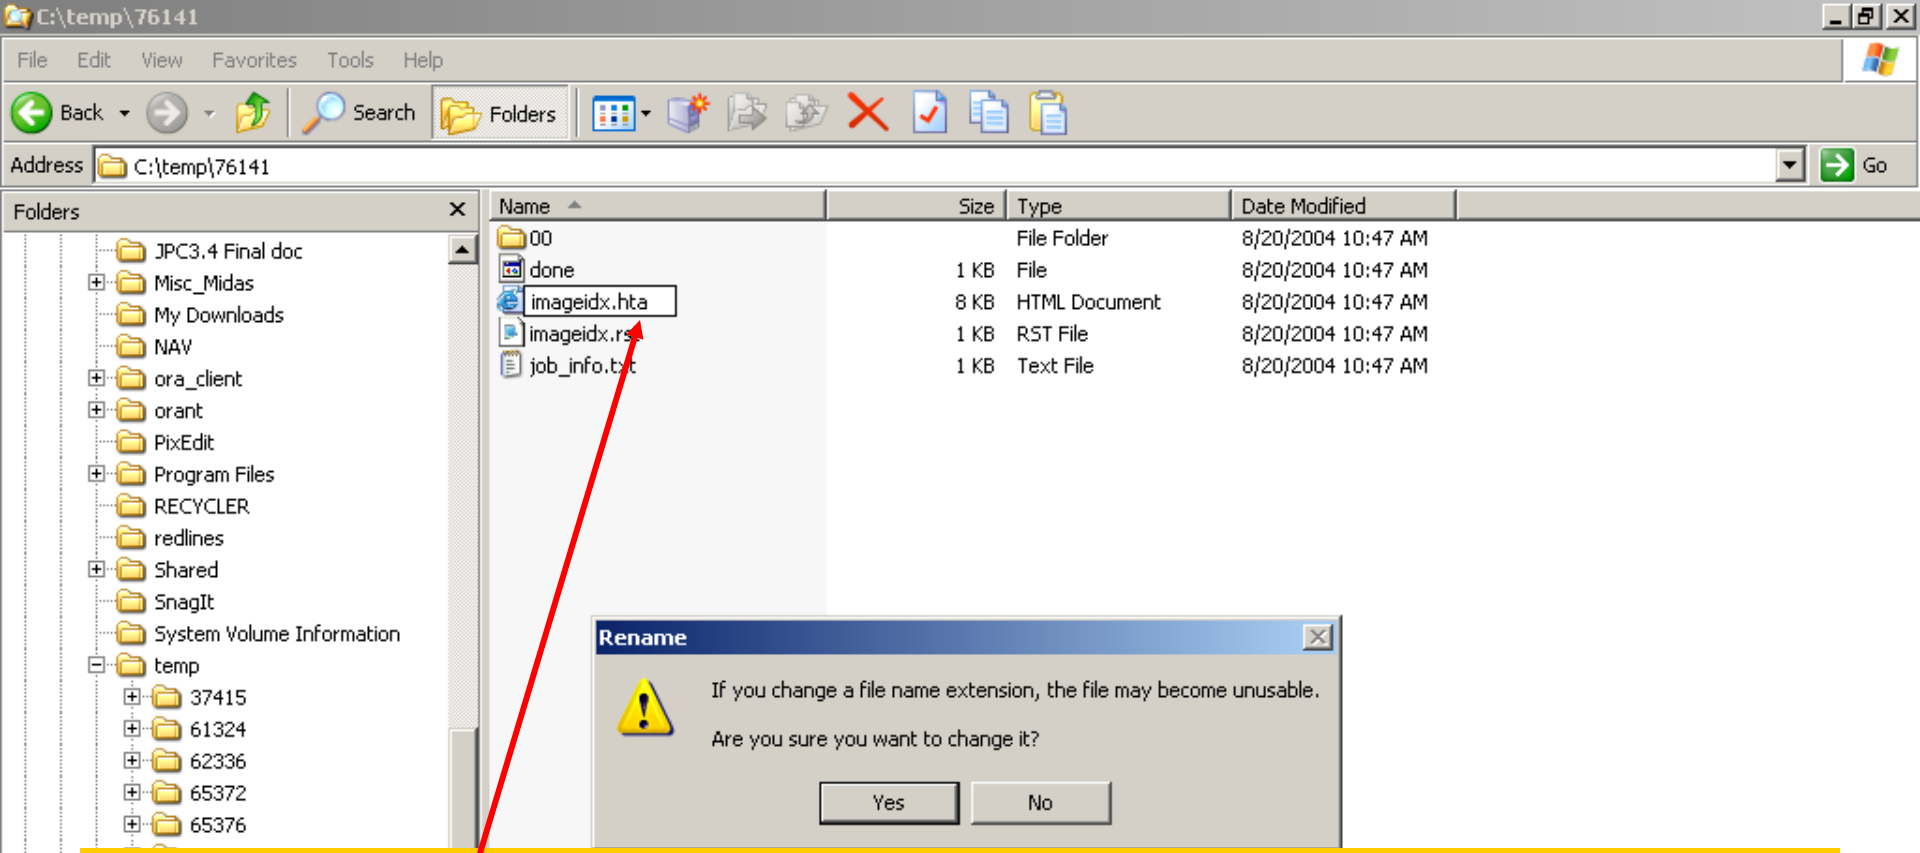
Step 32:
Select the <Job ID> that you need.
You should find one folder named “00” and 4-files, as shown above from Job ID 73595.
Start
8:54 AM



Step 33:

- **Due to an IE security patch, renaming the .htm file to .hta is necessary. Right click on icon, rename (This will be fixed in the next JEDMICS release due NLT Jan '05.)**
- **Select the "imageidx.hta" file and open by <Double Clicking> it.**



Step 34:

- Once the “m” has been changed to an “a”, a confirmation screen will appear to verify the change.
- Select Yes
- Select the “imageidx.hta” file and open by <Double Clicking> it.

Step 35:

Note:

This will be the image or drawings you plotted. This is why you need a viewer configured with the file types.

- Selecting View or the "V", you should be able to view your images. Selecting "P" or Plot will print the drawings (that you have selected) to your locally or LAN connected printer.

- These images will stay on your hard drive in the C:\temp directory until you go back and delete them.

<Close> this window.

<Logout> from Web Jedmics when completed.

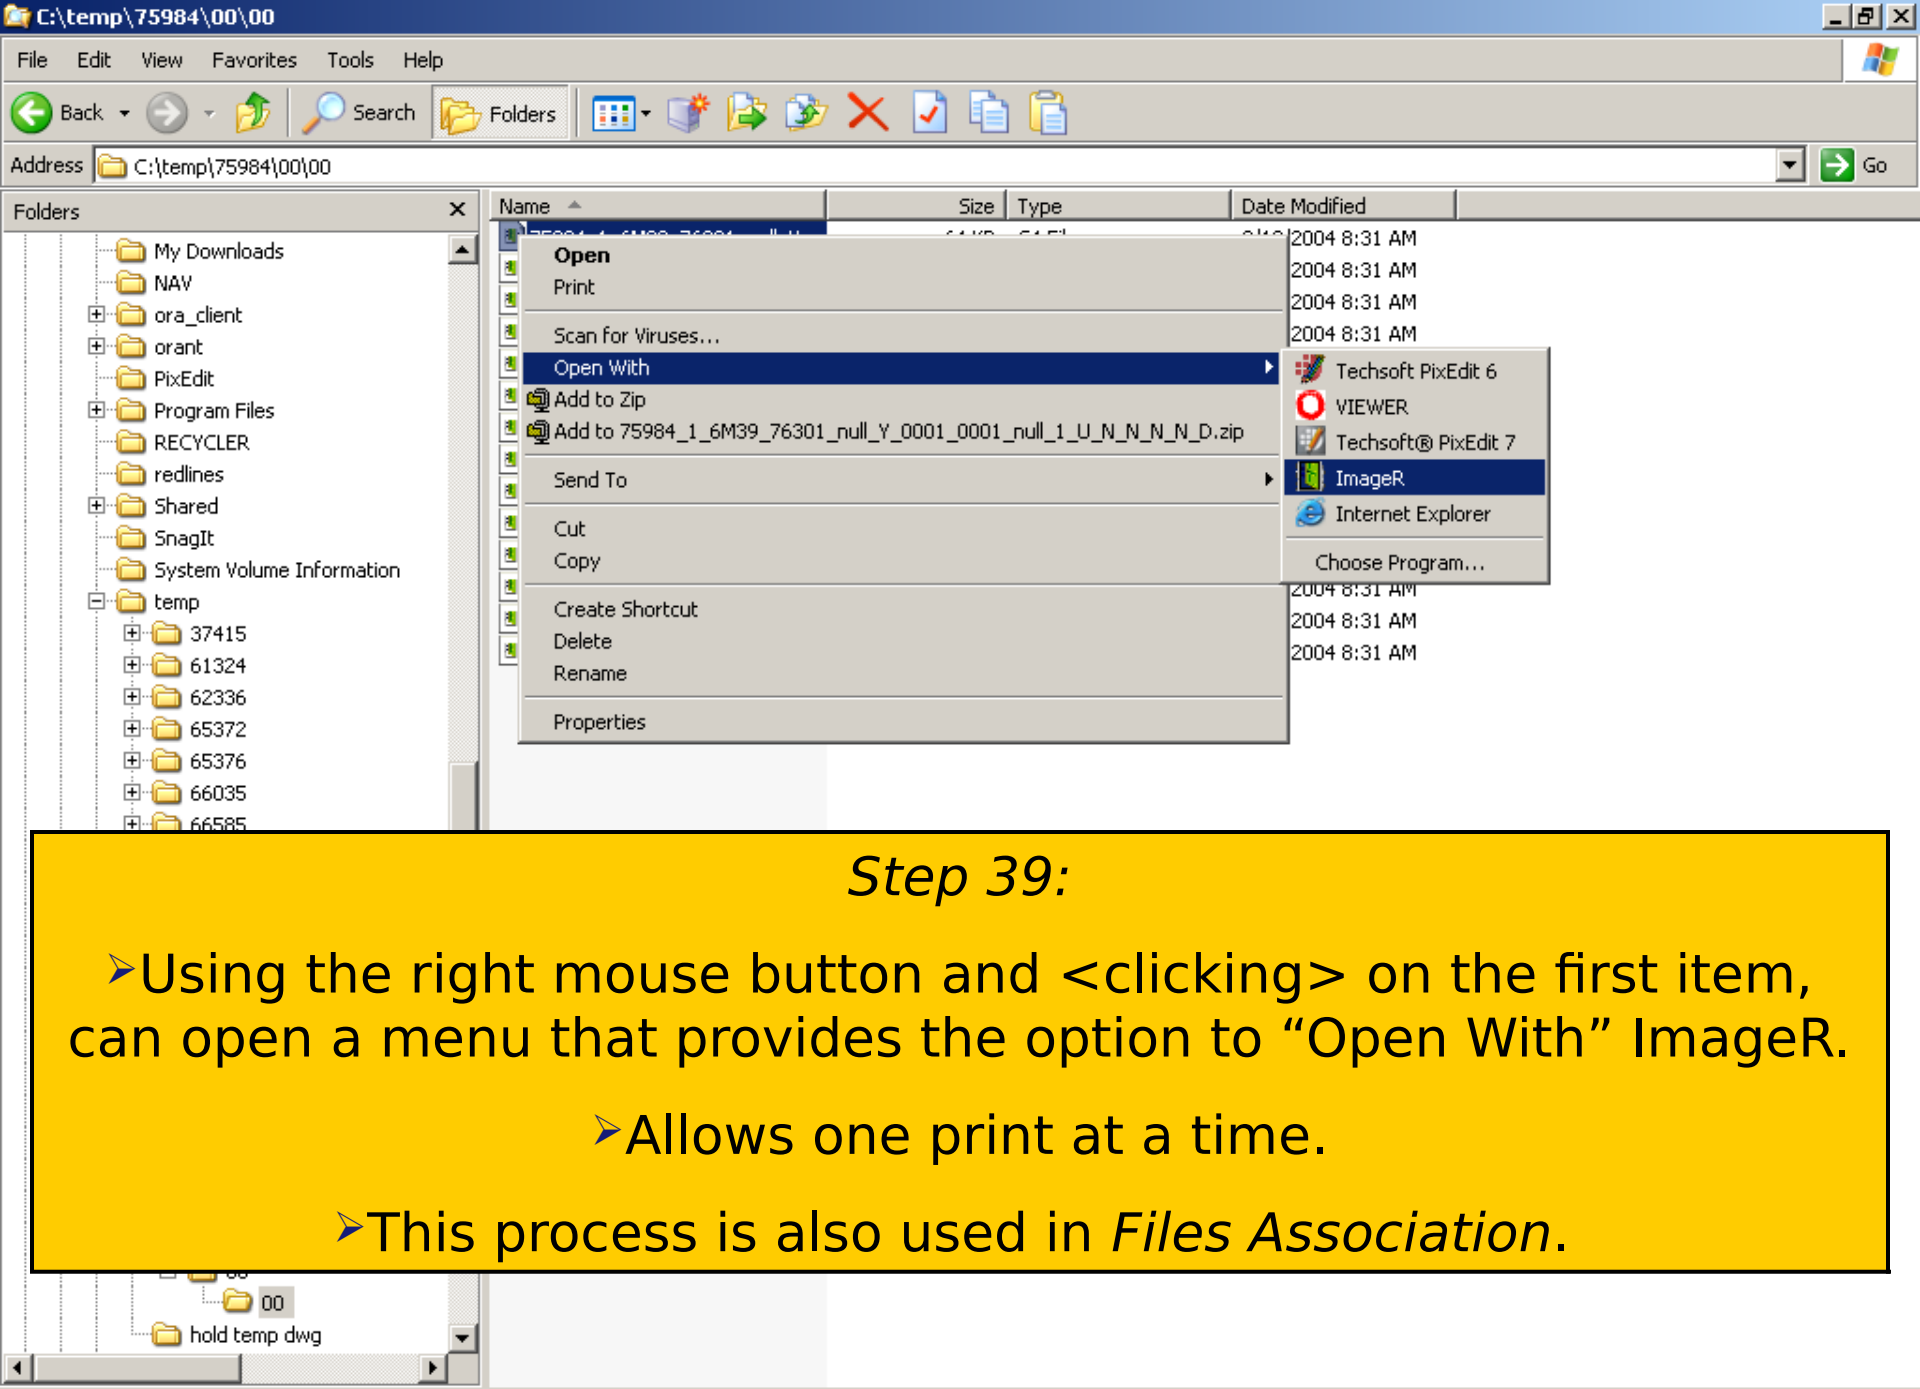
Step 38:
Files containing the same images are available that were found when you opened the imageidx.hta file. This method provides you the means to select your viewer.
Start
9:07 AM



Step 39:

- Using the right mouse button and <clicking> on the first item, can open a menu that provides the option to “Open With” ImageR.
- Allows one print at a time.
- This process is also used in *Files Association*.

Trusted sites
Start
10:32 AM

If the following information appears you will need to follow these instructions to set up the printer functionality.
NOTE: If you encounter problems, contact your Product Directorates Computer

- **Local Plot Configuration**
- Internet Explorer must have the WebJEDMICS server identified as a Trusted Site.
- From the Intenet Explorer Menu Bar
- Tools
- Internet Options...
- Security Tab
- Select the Trusted Sites Icon
- Select the Sites... Button
- Add your WebJEDMICS server as a Trusted Site
  - Example:**https://jedmics.robins.af.mil**

- The security setting under Custom Level Security for Trusted Sites 'Initialize and script ActiveX controls not marked as Safe' must be enabled. This allows for the writing and the deletion of JEDMICS repository images files to your local hard disk drive.
- Custom Level Button
- Enable: **'Initialize and script ActiveX controls not marked as safe'.**
- The security setting under Custom Level Security for Trusted Sites 'Access data sources across domains' must be enabled under the Miscellaneous options. This setting allows the image data from the WebJEDMICS server to be written to the local hard disk drive of the client machine.
- Custom Level Button
- Enable under Miscellaneous: **'Access data sources across domains'.**
- **Each file type that is to be locally plotted, must have an application associated with it through Windows Explorer in such a way that the application knows how to directly print the given file type.** Below is an a screen snapshot of Windows Explorer after the PowerPoint file "Local Plot.ppt" was selected and then the right mouse key was clicked. The popup menu contains Open, New, Print, and Show as known file type actions. The Print action is the one that is required for Local Plot to work correctly.

21-<Click> on the “V” to open first files for viewing

Alternative:

a <Open> the 00 folder
b <Open the second 00 folder
c <Open> the first file for viewing

Miscellaneous Information

HELPFUL HINTS

- All the frames inside the Web Jedmics can be resized. Put your mouse over the lines in the window, until your cursor changes to a line with arrows at both ends, then pull the line, up, down or sideways.
- The Temp RDS is originally set to 7 days. If you think you will need the TRDS longer than the 7days, you can change the number as you set up a new TRDS. If after that number of days, you still need the TRDS, reset the days again to 30 days through the Set Maintenance tab.
- % can be used as a wild card in searches.
- If you don't see more than one window in the Web, put your mouse over the lines inside of the windows and try to find a bar (the cursor will change to an arrow (on both ends) and pull the bar over to open that window.
- From the WebJEDMICS homepage you can access Frequently Asked Questions (FAQ). This may provide additional information.

Common Troubleshooting

- I can’t view the drawings?
  - How to setup a file association with ImageR?
- Remember to delete the files in the /temp directory.
- If you encounter difficulties in opening a website,
  - From the IE window select Tools, then Internet Options. From the “General” tab select delete “cookies” and delete Files (and offline content) Select OK. Try to open the website again. If this fails contact your Product Directorates Computer Support administration.

Printing from WebJEDMICS

- **User can print to either a JRL printer, a LFP printer, or a network printer**

Printers are strategically located throughout the Product Directorates. The JEDMICS HelpDesk can provide information for the location and printer ID.

- When printing to a LFP printer, the largest paper size available to the user is C. All drawings larger than C must be scaled to fit the C size paper.

- When printing to a JRL printer, all drawing sizes with the exception of K can be printed to actual size as long as the paper loaded on the printer is wide enough. (Allowable paper sizes are 11, 18, 24, and 36 inches. The widest drawing that can be printed is 34 inches with 36 inch paper loaded. This allows for a 1 inch margin on each side of the drawing.) **The drawings larger than C must be rotated with the top to the right for this to work properly. If they are not rotated, only the middle of the drawing is printed.**

- All drawing sizes can be printed from the viewer to a network/desktop printer. The size of the drawing is determined by the size of paper available.

- When printing larger than C size drawings, the printer does not roll the prints. Someone must be available to receive the prints as they are printed.

- Special formats such as PDF or DOC files must be printed from the appropriate viewer to a desktop printer.
